IP68
Standard Micro USB Rechargeable

Emergency Light System
2 diodes light up in event of power outage for instant retrieval

Features and benefits:

Tactical and standard switches

Pre-Focus delivers optimal beam output and coverage.

Break and scratch-proof Lexan™ lens

Easy operation while deploying handgun

Switch to deactivate the LEDs for installation in emergency vehicles with fluctuating power supply.

The set includes: battery / 230V charger / 12V charger / wall docking station

Crafted from aircraft-grade aluminum with a hard-coat anodized finish and securely sealed for an IP68 waterproof rating, the Patrol is your perfect partner while protecting the perimeter in extreme conditions. Attach an optional signal cone and transform the Patrol into an emergency signal wand to safely evacuate vehicles, people and even assist in aircraft landing. The pre-focused beam provides just enough diffusion without sacrificing spotlight to illuminate both the target and surroundings. The Patrol's hard-wearing rubber coating gives a sure grip in all conditions. Equipped with both a standard and a tactical switch, it is quick and easy to cycle through the Patrol's four operational modes. The charging station possesses extra LEDs that light up during a power failure, enabling fast retrieval in an emergency. Now new Patrol Charger + with extra battery charging station is available. You are able to charge a second battery (sold separately) and at the same time. This solution will make it possible to use Patrol twice as long.

Slipping for a Solid
Grip

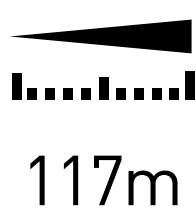

The set includes: batteries / clip

The right-angled M-Fire AG easily clips to fire fighters', EMS personnel's and first responders' uniforms or belts, providing critical illumination while freeing their hands to tackle the emergency at hand. The flashlight's slim profile securely hugs the body, preventing dangerous entanglements or being knocked off in close quarters. The Cree™ LED 323 lm pierce smoke and dust for up to 288 m, with 4 AA batteries power the M-Fire AG for 13 hours. Ex-ATEX intrinsically safe certification and an IP54 waterproof rating make the M-Fire AG the best light to take to the worse environments.

M-Fire 03

Mount for Kalisz Helmet
RHH0041

Mount for Gallet Helmet
PHH0012M

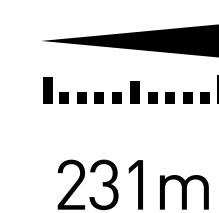

The set includes: batteries

Firefighters and professionals requiring reliable lighting to perform their courageous jobs in hazardous locations depend on the M-Fire 03 intrinsically safe (Ex ATEX) flashlight. To prevent sparks generated by an accidental opening, a screw secures the flashlight's head. A built-in pressure valve releases heat, keeping the flashlight's internal parts from dangerously overheating. Despite its helmet-friendly lightweight, the M-Fire 03 is shock, dust and water resistant boasting an IP67 rating. A magnetic switch easily engages the light's 180 lm. A safety lock prevents battery drainage while in transport, ensuring the M-Fire 03's 13-hour operation time is always available when needed.

Mount for Gallet Helmet
PHH0012M

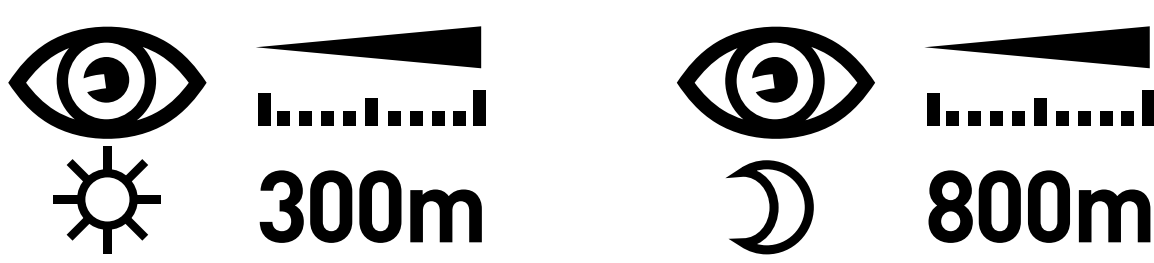

The set includes: batteries

The M-Fire is an intrinsically safe (Ex ATEX) flashlight that provides 133 lm of life-saving light in the most hazardous conditions. A screw secures the flashlight's head to prevent sparks generated by an accidental opening. A built-in valve releases heat, keeping the flashlight's internal parts from dangerously overheating. IP67 water & dust proof rating and 1-meter high shock resistance prove that the M-Fire 02 is as durable as it is ATEX certified safe. With all the features and power, weighing in at only 215 grams, the M-Fire 02 is a perfect match for the majority of firefighting helmets, mount optional.

M-Flare

L-DS-PACK-AMBER-AKU-Z

 IP66
Waterproof

Signaling cone with a LED flashing cap, perfect as a car equipment to use in emergency situation. Collapsible, packed in a handy, zipped cover. Possibility of height adjustment.

POLARIS

POLARIS, a portable helipad / airfield / drop zone lighting system, gets first responders where they need to be, safely. Versatile, it takes only one person mere minutes to set up the landing site with customized lighting patterns to meet both military and civilian demands.

LED PERIMETER FLARES

POLARIS offers two versions of flares. For maximum versatility, we recommend RGB and IR flares to meet country-specific regulations with adjustable colors of white, red, green, blue, amber and IR. An economical alternative is single color flares, available in white, amber and red.

REMOTE CONTROL & TRANSMITTERS UNITS

The unit operates both as a remote control and transmitter. For a single landing field with the same color flares, only one unit is required. For multiple landing sites or colors, for example to signal wind direction, an additional transmitter needs to be paired with the necessary flares and operated with the remote control unit. One remote control unit can operate up to 9 transmitters. Each transmitter can control an unlimited number of flares.

ADDITIONAL ACCESSORIES

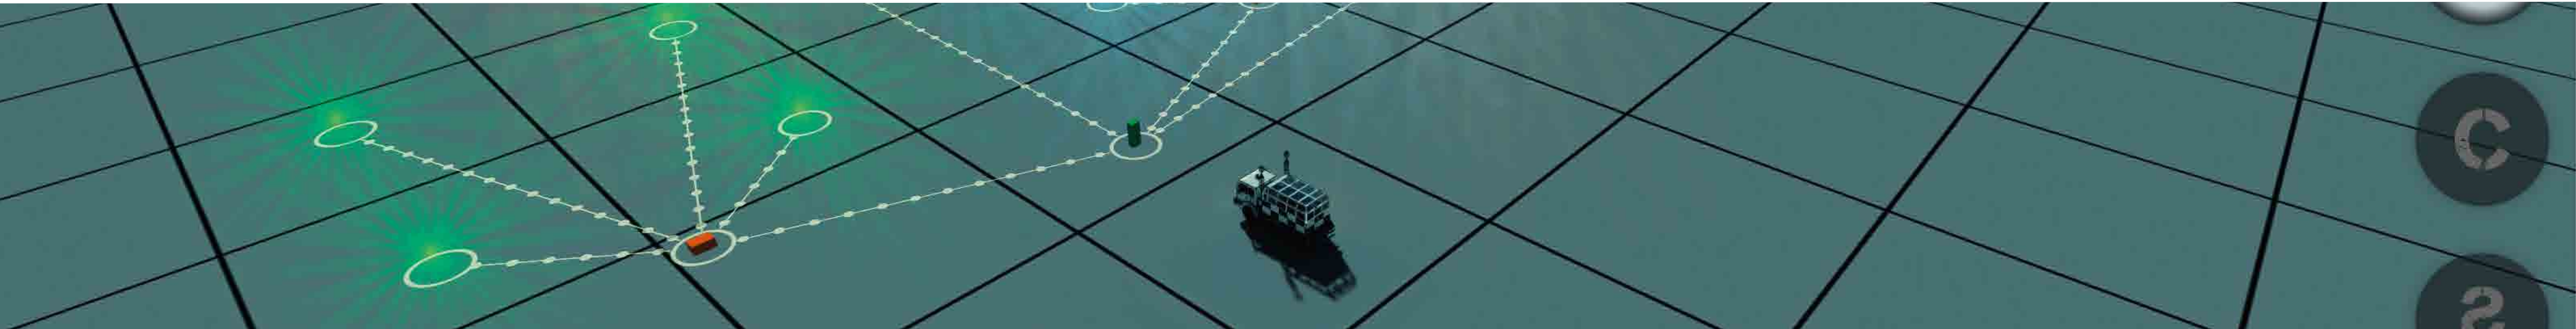

Secure rubber or steel bases that are impervious to prop wash and gusting winds.
Protective carrying cases for safe transport and rapid deployment.

POLARIS possesses an effective range of: remote control / transmitter 900m/2950 ft. Flare 200 m / 650 ft.
(For optimal performance, raise the remote control and transmitter units to 1 m / 3 ft. above ground.
The POLARIS Helipads/drop zones are visible at an altitude of 4000 m / 13 100 ft.)

Dependent upon the weather, the POLARIS operator can effectively control the lighting system from up to 1100 m / 3600 ft. Placed upon a flight control tower, the range covers a medium sized airfield with a runway up to 2000 m / 6500 ft. The durable construction and hermetically sealed elements provide superb protection against severe atmospheric conditions.

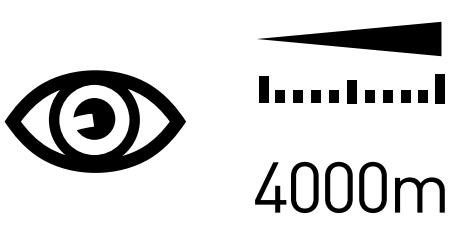

Visit our website and interactively deploy the POLARIS in a training simulation
